A pretty solid Classic JRPG with some good music. Damn worth a play thou wait till it's on sale as \$15 is a little bit too much.. Its a really fun game and has a lot of replayability. Easy to get into and well worth the price if you like exploration type sapce shooty.. Let's start by the fact that it has a demo (+1), Always better trying a demo than buying a game and feel like being cheated.

It is an open empty world. Meaning that you can run a lot, everywhere, and find nothing. just plain fields.

Run, or drive.

You got a car to enhance, by buying new engines, protective gear (SPIKES) And Nitro, helpful if you've got one of these moments where you want to jump from high cliffs. Careful tho, as your car is damageable and can lose parts of its body. Driving is quite enjoyable and responsive.

You got 5 weapons (One of them is a baseball bat which sends zombie flying scoring home runs).

You simply are an average hero who's going to save the world from a zombie invasion. Nothing more, nothing less.

It's an average game, with a debatable humor (I found it funny, tho.), go-there-and-do-this-then-come-back mission type, a race, an entire city to free from mafia (Zombie).

The soundtrack is pretty good, it's jut a bit limited and you'll end up hearing the same song three times in a row, too.

Graphics aren't the best, but cities and other places are, in my opinion, detailed. By detailed I mean that there are a lot of particulars that add a bit more dynamism and entertain the eye. I often found myself moving the camera around, trying to find something odd, unexpected.

After all I still recommend it: calling it the worst game ever is overly exaggerated, although there aren't 5 bosses and the story isn't exactly well written. It's just an average game, enjoyable if you don't expect that every game you own is a GOTY or received a score of 90 V 100.

The last advice I can give is to not buy it on full price, wait for at least 50% discount.. Played like half hour - was enough. boring combat, clunky animation and movements. Controlling characters are confusing, not very effective even with hot keys. Stay away even on sale price.. More less ok cards and backgrounds.

The game really got bad reviews due to the empty scenario that just haves nothing .The cards do give a bit in return but not my fav game for the money you would spend .. An entertaining but challenging romp.. As others have said, interesting idea, but poorly executed.

The game is supposed to be an exciting, fast-paced cobbling together of clues to figure out who's targeting you, and eliminate them first. The problem is that there's practically no communication or feedback to the player on their decisions. It ends up being so incomprehensible that it looks like things are happening randomly, even though I'm sure they're not.

For example, in my 2nd game, Mold events were all over the place. So I figure "Oh, ok, Mold is in a weird power struggle with itself, taking everyone else down in the crossfire". Thankfully I don't pull the trigger because out of nowhere Lisko gets everyone to riot against me, despite giving me a favorable "interview" just days ago? Then strangely I can't assault her until later for no explained reason. Her clues went from "Has my number, annoying the police" to "Attacking my stronghold". I did a ton of events and NOTHING pointed to her. I even did hacking with Fungus and got nothing. I talked to multiple people, and....nothing. Hilariously enough I not only won a game where I was wrong. I won a game where I had no idea what was going on, neutralized someone who wasn't a mole, and basically sat around for 7 days. That shouldn't be possible.

My last complaint, if you stuck around this long, is again harping on how this game deliberately keeps you in the dark on everything. There's a very brief sound when the tv turns on, which honestly I was never able to tell if it was that or a sound for finding a clue or a new mission. There's no sound, just subtitles, so if you go into ANY menu you can't tell what's happening, but if you sit there you're wasting extremely valuable time. You've apparently worked with your agents for years, but your relation and their background aren't explained at all. This leads to events happening that you just won't understand. Some megacity on Venus is burning and crashing into the ocean? What happened? Is that us? Where are we anyway?...Some traitor fleet is demanding a planet? Who are they? Why do I care? How does this affect the plot? Who the hell are the Press Corp and why are they apparently bad during this broadcast??? Mold is getting burned alive and begging for help? Why should I? What

happened because I said no? The game just moves right along and doesn't care to explain anything happening to you. It's cool you have all these characters and a universe and moving pieces, but if you don't bother to make it clear to the player what's happening, then they'll just flail a bit and move on.

wtf is this

. Reveal The Deep's launcher is broken; I Can't run it. I got win7 Ulti [64-bit]. Unfortunately a downvote for this one.. really great model and high in detail. I would recomend this. I think out of all of the games this company made when it comes to Virtual Families\Virtual Villagers, this one is the better one, I find that the puzzles (though complicated at times) aren't just too hidden or impossible to figure out and the animation is better than others they've done. It's not Sims, but it's a cute game.. Its a great game for first day, then the same over and over thing happens and if you want to kill the final boss you need to replay it over 20 times. That is kinda grind only and not really fun....
